Illinois is a capsule of the elements that make the American economic system strong.

Situated in the center of the richest and most productive nation in the world, Illinois is ideally located for the acquisition of raw materials and the distribution of finished goods. Enhancing the state's appeal as a business site are its own natural resources, its unmatched transportation network, its proximity to major domestic markets and its access to overseas markets. Thus, it has not been by chance that Illinois has become home to well over 200,000 manufacturing and non-manufacturing companies.

We invite investors to compare our state to any other as a potential business location. We feel Illinois will prove to be the best choice.

Sincerely,

A handwritten signature in dark ink, reading "Ray C. Dickerson". The signature is fluid and cursive, with a large, sweeping "R" and "D".

## INTRODUCTORY NOTE

## INTRODUCTORY NOTE

This handbook has been prepared by the Department of Business and Economic Development as a data reference for use by those interested in investing in a business or industrial plant in the State of Illinois. For the purposes of the book, the State has been divided into sixteen regions, each of which is identified by the name of a principal city within it. Data in the book is presented separately for each region. A Statewide summary section is also provided.

The data presented are for the most part for years prior to 1970. While not entirely current, they have been selected for presentation as the best available information which could be compiled for the purposes of the book. It is anticipated that the book will be revised periodically as more recent and pertinent data become available.

The subjects for which data are presented in the book, along with notes and explanations concerning the data, are given below.

### KEY ELEMENTS OF THE ECONOMIC BASE

These tables are derived from Estimated Basic Income profiles for Illinois counties, previously prepared and published by the Department of Business and Economic Development, and consist of aggregations of figures for counties within each Region, updated through 1967.

Basic Income is income derived largely from sources outside the county or Region--through the sale of local products and services to the rest of the State, nation or world (and to visitors who come from these outside areas), or through the location in the county or Region of facilities (such as a University) or the local impact of programs (such as Social Security) which are funded on a Statewide or nationwide basis--and which enables the local community (county or Region) to "import" from the rest of the State, nation or world the many goods or services which it needs but does not produce.

Basic Income is only a portion of total community personal income (roughly half, in most communities), but it is significant to planning for investment in a business or industrial plant because, over time, its level is the bellwether of community economic activity, total income, and (considered within the framework of general birthrate trends) population growth or decline.

Some of the Basic Income figures presented in the KEY ELEMENTS OF THE ECONOMIC BASE tables were taken directly from United States Government or State of Illinois reports. Others were developed using such reports as bases. It is believed that the six elements used in the tables account for the bulk of Basic Income in the sub-regions of the State, except in Region 1 (Chicago). In this Region, other elements--large business headquarters operations, for example--account for a significant portion, probably as much as twenty percent of the total. Also, in this Region a significant portion of some elements (such as manufacturing payrolls) is probably attributable to local, rather than outside consumption. The tables for Region 1 should, therefore, be viewed with consideration for the large market and complex economy which the Region represents. It should be noted that the Basic Income figures in the tables are based mainly on data reported by "place of work," rather than by "place of residence," thus portions of this income are apt to be supporting some economic activity (and population) outside the Region (as in the case of Region 4, Rock Island). In other cases, a Region located near another having a large urban center is apt to experience economic (and population) growth attributable to the Basic Income growth of the large urban center (as in the case of Region 13, East St. Louis).

In the KEY ELEMENTS OF THE ECONOMIC BASE tables, as in others in this book, details may not add up to totals due to rounding. In all cases a hyphen indicates zero, and NA indicates not available.

## POPULATION

In the population tables, the figures shown for 1950 and 1960 are those reported in the United States Decennial Censuses. The 1960-1966 components of population change figures--births, deaths and net migration--were prepared by the United States Bureau of the Census. Net migration was estimated through the application of a method (based largely on school enrollment data) developed and refined by the Bureau over a period of several years. The county (and Regional) estimates for 1967 and projections to 1980 were prepared by the Department of Business and Economic Development, based on the Bureau of the Census estimates for 1966 and projections for the State as a whole, and on a review of economic development prospects among the State's subareas. City figures shown for 1967 and 1980, prepared by the Department of Business and Economic Development, represent projections of two kinds: (1) projections of trends between 1960 and the dates of subsequent special censuses, and (2) projections of trends between 1950 and 1960 (in cases where no post-1960 special censuses were taken). Some adjustments in the 1980 figures for cities in northeastern Illinois (Region 1) were made based on reports prepared by the Northeastern Illinois Planning Commission and the Hospital Planning Council for Metropolitan Chicago. It should be noted that, generally, the projections for cities are not intended to account for large-scale annexations of developed areas or other unusual growth factors. Populations of small cities and rural areas, not shown in the tables, are, of course, included in the county and regional totals.

## PERSONAL INCOME

Total Personal Income figures shown were prepared by the Office of Business Economics, United States Department of Commerce. Total Personal Income is the current income (for the year given) of persons in an area from

all sources. It is measured before deduction of income and other personal taxes, but after deduction of personal contributions to Social Security, government retirement, and other social insurance programs. It includes income received from business, Federal and State and local governments, households and institutions, and foreign countries. It consists of wages and salaries (in cash and in kind and including tips and bonuses as well as contractual compensation), various types of supplementary earnings termed "other" labor income (the largest item being employer contributions to private pensions and welfare funds), and the net incomes of owners of unincorporated businesses (farm and nonfarm), including the incomes of independent professionals, net rental income, dividends, interest, and government and business transfer payments (consisting in general of disbursements to persons for which no services are rendered currently, such as unemployment benefits, Social Security payments, and welfare and relief payments). The Office of Business Economics, in the figures presented, has measured the components labor and entrepreneurial income by place of work (rather than by place of residence). The components property income and transfer payments have been measured by place of residence. The Total Personal Income figures in the tables for the Rock Island and East St. Louis Regions, particularly, should be viewed with consideration for these measurement criteria.

The Adjusted Gross Income figures shown in the tables were compiled and published, by three-digit Zip Code Areas, by the United States Internal Revenue Service, based on 1966 individual income tax returns. The Zip Code Areas approximate, but are not coterminous with the Regions used for presentation of other data in this book. For differences between the Areas and Regions, see the map on page ix. For many taxpayers whose only source of income was salaries and wages, Adjusted Gross Income was their total income. For others,

this amount was the result of reducing total income from all sources subject to tax by deductions such as business expenses, employee business and moving expenses, etc.

Transfer payments were compiled by the Department of Business and Economic Development from various government sources. They have been added to Adjusted Gross Income (as separate entries in the tables) because they are not considered taxable income by the Internal Revenue Service, yet they constitute a substantial portion of the incomes of many families and individuals.

The population figures used to compute per capita income are aggregations of county estimates prepared by the United States Bureau of the Census as of July 1, 1966 (see notes on POPULATION, above).

#### MANUFACTURING ESTABLISHMENTS

The Regional data were compiled from the 1963 Census of Manufactures, United States Department of Commerce. The data for 1967 shown in the State-wide summary are from a preliminary 1967 Census of Manufactures report. The Department of Business and Economic Development, from directories, government publications, and its own community files, can supply more recent information on manufacturing plants in individual communities on request.

#### WATER RESOURCES AND MINERAL AND AGRICULTURAL PRODUCTION

The water resource and withdrawal figures presented for 1967 are based on county estimates prepared by the Illinois Water Survey, Illinois Department of Registration and Education.

Mineral production figures shown have been reproduced from Minerals Yearbook, 1967, United States Department of the Interior, Bureau of Mines.

Agricultural production figures shown have been reproduced from Illinois Agricultural Statistics, Annual Summary, 1967, prepared by the Illinois Cooperative Crop Reporting Service.

#### SELECTED EMPLOYMENT AND WAGE DATA, 1967, 1968 and 1969

These data were compiled from Employment and Annual Payrolls of Firms Covered by the Illinois Unemployment Compensation Act, by Industry and County, issued by the Illinois Department of Labor, Bureau of Employment Security.

#### TRANSPORTATION

These data were compiled from the files of the Department of Business and Economic Development, and from various published and unpublished materials including Illinois' Complete Highway Plan, 1970-1990, Illinois Highway Study Commission; Illinois Airport Directory (revised, 1968), Illinois Department of Aeronautics; and A Study of River Ports and Terminals, Transportation Institute Southern Illinois University, 1967-1968. The Interstate and Other Proposed Freeways map, page v, represents the general plan for highway construction endorsed by the State Administration.

In the transportation tables, abbreviations are used to designate air-lines, railroads and barge companies, and codes are used to designate the general types of commodities which can be handled by terminals at river ports. The keys to the abbreviations and codes are given below.

COMMUNITY FACILITIES AND SERVICES

Data on primary and secondary education were compiled from published and unpublished materials prepared by the Office of the Illinois Superintendent of Public Instruction, including Fall Pupil Enrollment and Teacher Statistics, Illinois Public Schools (and Independent, Parochial and Private Schools),

1966-1967, and data on per-pupil operating expenditures (unpublished).

Average daily attendance, rather than enrollment, is used in the tabulations. Higher education data were compiled from several sources including Enrollment in Institutions of Higher Learning in Illinois, 1967, Bureau of Institutional Research, University of Illinois, and Educational Directory, 1968-1969, National Center for Educational Statistics.

Data on medical services were compiled from Distribution of Physicians, Hospitals and Hospital Beds in the U. S., 1966, American Medical Association, and Directory of Health Care Facilities and Approved Schools of Nursing, 1968, Illinois Department of Public Health. Police and firemen data were compiled from the 1967 Census of Governments, Compendium of Public Employment, United States Department of Commerce, and a local law enforcement officers census (February, 1968, unpublished) by the Illinois State Police and Illinois Local Government Law Enforcement Officers Training Board.

#### LOCAL HOUSING PERMITS AND VALUES

The data on authorized residential building permits, and average values of units authorized (available for a few cities), were compiled from Construction Reports-Housing Authorized by Building Permits and Public Contracts, United States Department of Commerce.

The value of single and multiple units is probably underreported by an average of 10 percent according to local and national agencies which collect housing permit and value data. This percentage excludes fees for architectural and engineering services, and may vary substantially among the local reporting units.

LOCAL GOVERNMENT FINANCES

Local government data shown (which is aggregated to county totals) were compiled from the 1967 Census of Governments, Compendium of Government Finances, United States Department of Commerce.

## REGION 1 - WATER RESOURCES AND MINERAL AND AGRICULTURAL PRODUCTION

### Water Resources, 1967

Estimated ground and surface water supplies--safe yield, million gallons daily (mgd) . . . . .	6,710*
Estimated average daily withdrawal (mgd) . . . . .	<u>2,029</u>
Indicated water surplus (mgd). . . . .	<u>4,681</u>

### Mineral Production, 1967

Minerals produced in order of value (with quantities shown where available):

McHenry County--sand and gravel (5,496,000 short tons), stone (9,000 short tons)	
Lake County--sand and gravel (1,066,000 short tons), peat	
DeKalb County--stone, sand and gravel (382,000 short tons)	
Kane County--sand and gravel (3,229,000 short tons), stone (478,000 short tons)	
DuPage County--stone, sand and gravel	
Cook County--stone, lime, sand and gravel (1,177,000 short tons), clays, peat	
Kendall County--sand and gravel (323,000 short tons), stone	
Grundy County--sand and gravel (2,135,000 short tons), coal (262,000 short tons), clays	
Will County--stone (2,552,000 short tons), sand and gravel (3,285,000 short tons), coal (493,000 short tons)	

### Agricultural Production, 1967

Crop production (bushels):

Corn (for grain). . . . .	79,544,800
Soybeans (for beans). . . . .	9,876,700
Wheat . . . . .	1,835,500
Oats. . . . .	6,821,200

Livestock inventory (no. head on farms):

All cattle. . . . .	329,600
Milk cows (two years old and over). . . . .	71,900
Beef cows (two years old and over). . . . .	22,200
Hogs. . . . .	357,400
Stock sheep . . . . .	25,100

Milk production (thous. of lbs.) . . . . .	626,700
--	---------

Egg production (thous. of eggs). . . . .	333,561
--	---------

\*Includes 3,200 cubic feet per second of Lake Michigan water presently allocated to Illinois by United States Supreme Court decision.
